

Edgetech Instruments

TECHNICAL NOTE

AcuDew TTI (Transmitter Trade-In) Program

Edgetech Instruments offers a solution to the issue of “downtime” when needing to have your moisture sensor/transmitter recalibrated. Edgetech now offers our AcuDew TTI transmitter which is a replacement AcuDew Dewpoint Transmitter, purchased and supplied just prior to the need (or “as needed” in the case of an unexpected failure) for recalibration. Aluminum oxide moisture sensors need to be recalibrated periodically, typically once per year, and returning them to the factory for recalibration can take weeks, if not even longer. The Edgetech TTI program offers replacement AcuDew transmitters at a minimal 10% adder over the cost of a recalibration and over 50% less than a new AcuDew. This allows Edgetech to supply the replacement AcuDew prior to the removal of the currently installed AcuDew, virtually eliminating downtime. Versus the cost of a new AcuDew Moisture Transmitter, the TTI AcuDew is approximately 60% less, plus the costs of inventorying a spare transmitter is eliminated.

The TTI AcuDew is a transmitter with a new sensor, fresh calibration, NIST traceable certificate, and refurbished electronics. The TTI AcuDew comes with a complete and full warranty, exactly the same as an AcuDew purchased new. There is also the option to have the TTI AcuDew delivered with a ISO/IEC 17025:2008 certificate of calibration. The AcuDew is calibrated and supported in the USA, in the Edgetech Instruments’ modern ISO/IEC 17025 accredited calibration laboratory located in our ISO 9001:2015 registered facility.

The Edgetech AcuDew TTI Moisture Transmitter program is a great way to keep your moisture transmitters’ calibrations up to date easily and cost effectively.
